Muriatic Acid
(lowers pH)
(lowers Total Alkalinity)
CAUTION: FUMES

Muriatic Acid
(lowers pH)
(lowers Total Alkalinity)
CAUTION: FUMES

Use this as an aide in understanding how to perform the Cyanuric Acid test. Act as if this was pool water. It should test as having 50 ppm CyA.

Cyanuric Acid
i.e. conditioner

Cyanuric Acid
i.e. conditioner

Superchlorination of the main pool requires about **15 gallons** of sodium hypochlorite.

Use the markings on the side of this tank to measure **15** gallons.

To observe how much chlorine is used by the wading pool, try not to use this tank for the main pool

Reorder sodium hypochlorite before starting use of the 3rd tank.

SWIM TEAM Equipment

THINK SECURITY
Make sure this door's 2 locks
are secure when you leave.

SWIM TEAM Equipment

THINK SECURITY
Lock this door using the slide
bolt and the padlock.

SWIM TEAM Equipment

DO NOT lock the deadbolt or door
handle during the pool season; the
outside slide bolt is to be used
instead during the summer months.

Please don't sit on this.

Coaches:
Close and secure this door both
during and after your sporting event.
Please don't leave this door open
while unattended. Thanks

Please don't sit on this.
